

I'd really like to indent the URL like this.

```
http://vic.norton.name/finance-math/notionportf/  
pricedistrib.csv
```

It does look right, but clicking on the top line of the "URL" takes you to an inaccessible directory. Only the bottom line works the way it should.

On the other hand clicking anyplace on the "hello" link below works perfectly.

I'd really like to indent the URL like this.

```
hello hello hello hello hello hello hello  
hello hello hello hello hello hello hello  
hello hello
```

What is the problem here? What am I missing?

Thanks for any advice you can give me.

Regards,
